DISCOVERY REPORT

An AI tool that helps college students prepare for technical interviews by analyzing their resumes, identifying skill gaps, generating personalized questions, and tracking their progress.

Generated Oct 11, 2026 · 7 sections · 16 findings · 2 sources

> Findings are written by a language model from search-result excerpts. Linked sources show what the model was given. They do not confirm that a claim is true, and they do not establish customer demand, willingness to pay or product-market fit.

01 Key Problems

Linked to web sources · 1 item

1.1 Job seekers struggle to identify what hiring managers are looking for when preparing for interviews. [1][2]

02 Target Users

Linked to web sources · 1 item

2.1 The target users are individuals seeking interview preparation tailored to specific job descriptions. [1][2]

03 Competitor Findings

Linked to web sources · 1 item

3.1 Existing AI interview preparation tools claim to generate personalized roadmaps by analyzing job descriptions. [1][2]

04 Assumptions

Unverified assumption · 4 items

4.1 Job seekers value and will adopt AI-generated interview roadmaps.

4.2 The roadmap can be accurately derived from job descriptions and resumes.

4.3 Students will regularly use the tool to track progress.

4.4 The tool’s suggestions will improve interview performance.

05 Opportunities

Inference from linked sources · 1 item

5.1 Develop a lightweight AI tool that accepts a job description and outputs a concise interview preparation roadmap, highlighting key skills and learning resources. [1][2]

06 MVP Features

Recommendation, not sourced · 4 items

6.1	Upload or paste resume and job description
6.2	AI analysis highlighting skill gaps and key interview topics
6.3	Generated personalized list of practice questions
6.4	Simple progress tracker for completed questions

07 Validation Experiments

Recommendation, not sourced · 4 items

7.1	Send a landing page to a mailing list of recent graduates asking if they'd use a free roadmap generator and track click-through rates.
7.2	Collect a sample of 20 resumes and 10 job descriptions, generate roadmaps, then have 5 hiring managers rate relevance on a 5-point scale.
7.3	Release the MVP to a group of 50 students and track daily active usage over 4 weeks.
7.4	Randomly assign 30 users to receive the AI roadmap and 30 to a generic study list, then compare interview success rates reported after 3 months.
